

Current Zeng

SDET & Test Automation · Creative Media · Apple Platforms

currentzeng.com | me@currentzeng.com | (604) 722-6954

Senior QA Engineer with 7+ years across software, hardware, APIs, SaaS, and connected systems. Builds automation and QA tooling in Python and Playwright, isolates cross-layer defects, and drives release quality. Brings iOS/Swift development, advanced digital photography and photo editing, personal video production, GenAI-assisted test design, and cross-functional leadership.

Core Skills

Test Engineering: End-to-End Testing, Test Planning, Requirements Analysis, Test Case Design, Regression Testing, Defect Isolation

Automation & Programming: Python, Swift, Playwright, Selenium, Sahi, TypeScript, JavaScript, Java, SQL, Jenkins

Platforms & Systems: iOS, macOS, Mobile/Desktop Apps, REST APIs, Backend Services, SaaS, Firmware, Embedded Hardware

AI-Assisted QA: Prompt Engineering, Test Generation, Failure Analysis, Coverage-Gap Identification, Jira, Atlassian MCP

Creative Media: Digital Photography, Photo Editing, Photoshop, Lightroom, Illustrator, Snapseed, Personal Video Editing

Professional Experience

Senior Software & Hardware QA Engineer (SDET) | June 2019 - Present

Vecima Network Inc. - Nero Global Tracking | Burnaby, BC

Lead QA and automation for SaaS telematics and web platforms spanning front-end, APIs, backend services, firmware, and hardware. Plan, design, and execute end-to-end tests, maintain UI automation in Playwright, and build internal tools for hardware validation and remote diagnostics.

Key Achievements

- Applied prompt-guided AI workflows to accelerate UI automation migration from Sahi to Playwright, independently reviewing, debugging, and validating generated code before release.
- Engineered repeatable Cursor prompts that converted feature requirements into structured JSON test cases for Jira, reducing manual authoring effort and improving consistency.
- Applied Atlassian MCP tooling to review Jira requirements, identify missing scenarios and edge cases, and expand functional and regression test coverage.
- Isolate front-end, API, backend, firmware, and hardware defects using logs, system behaviour, and reproducible evidence; document regressions clearly for engineering teams.

Professional Experience (Continued)

Jr. Electronic Engineer | May 2018 - Apr 2019

Neil Squire Society | Burnaby, BC

Designed, prototyped, and validated assistive hardware, including microcontroller-based devices, custom PCBs, and Arduino C firmware for proximity and sip-and-puff interfaces. Partnered with mechanical engineers to isolate integration issues, deliver user-focused products, and build a component library that streamlined PCB design.

Professional Projects

Reindeer Education Website & Visit Booking System

Role: Full-Stack Web Developer

Stack: Next.js, React, TypeScript, Tailwind CSS, Resend, Vitest, Vercel

- Built a responsive school website with program pages, faculty profiles, galleries, and visit booking.
- Created reusable TypeScript/Tailwind components and content-driven routing for easy site updates.
- Implemented visit requests with validation, spam protection, UUID idempotency, and Resend emails.

Bazi Atlas iOS App

Role: Full-Stack Mobile Developer

Stack: React Native, Expo, TypeScript, Swift, Supabase, RevenueCat, SQLite, MMKV, WidgetKit

- Built and self-tested a bilingual React Native/Expo iOS app for chart analysis, saved records, comparison, learning, and knowledge lookup.
- Engineered and tested a TypeScript BaZi engine for true solar time, Four Pillars, Ten Gods, Wuxing, Shen Sha, and transit analysis.
- Tested Swift/WidgetKit features, Sign in with Apple, RevenueCat purchases, Supabase backup, SQLite search, MMKV storage, and deep links.

Education

Bachelor of Applied Science in Engineering Science

Electronics Engineering Concentration · Co-operative Education

Simon Fraser University · Burnaby, BC · February 2018

Leadership & Volunteer

Co-Founder & Director | FCMS | Vancouver, BC | 2021 - Present

Co-founded FCMS, a non-profit supporting independent musicians through community events, performance opportunities, and artist-focused media programming. Directed six large events for 100-700 attendees, managing schedules, sponsors, volunteers, budgets, live sound, and technical production under tight deadlines. Led FCMS On Set, a 12-video live-performance series, coordinating artist sessions, audio, visual production, and delivery.
