**Hiring Manager  
Dialpad  
Vancouver, BC**

**Re: Sr. Software Development Engineer in Test**

Dear Hiring Team,

I am writing to apply for the Senior Software Development Engineer in Test position on Dialpad's Agentic QA team. Over the past seven years as a Software QA Engineer, I have developed deep experience in test automation, SaaS and API validation, hardware and software integration, and cross-functional quality ownership. I am particularly interested in this opportunity because it combines senior-level quality engineering with substantial software development, automation infrastructure, and the evaluation of AI-driven product experiences.

In my current role, I led the migration of our automation system from a licensed Sahi-based solution to a Playwright framework that can be used across QA, Development, and Customer Engineering. This reduced tooling costs, expanded automation ownership beyond the QA team, and created a more maintainable foundation for regression testing. I have also built a web-based internal tool that automated portions of a hardware testing and remote diagnostic workflow, contributed to API and frontend testing, shortened regression cycles, and mentored junior and co-op engineers. These experiences have taught me to approach quality as an engineering discipline: building systems that improve testability, provide faster feedback, and help teams release with greater confidence.

Alongside my professional work, I have built and shipped AI-assisted product projects, including an iOS application, a production education platform, and internal workflow tools. I regularly use AI coding agents to accelerate implementation, test development, debugging, and refactoring while maintaining careful human review of the resulting code and behaviour. I am especially interested in applying my automation background to the challenges of agentic systems, where deterministic functional checks must be combined with structured evaluations of response quality, task success, edge cases, reliability, and non-deterministic behaviour.

Dialpad's focus on building dependable AI Voice Agent experiences strongly aligns with the direction in which I want to take my career. I would bring a combination of mature QA judgment, hands-on automation development, product-oriented systems thinking, and a strong willingness to learn the evaluation techniques required for production AI systems. I would welcome the opportunity to help Dialpad build scalable quality frameworks and deliver AI agent experiences that are stable, observable, safe, and genuinely useful to customers.

Sincerely,  
Current Zeng
