

Current Zeng

Quality Engineering • Test Automation • Web & Mobile Development

currentzeng.com | me@currentzeng.com

Vancouver, BC | Pacific Time

QA engineer with 7+ years of experience across web and mobile applications, SaaS, firmware, and connected hardware. Owns test automation migrations, investigates failures across system boundaries, and mentors QA colleagues. Builds web and iOS products with AI-assisted development, combining product design and hands-on validation.

Core Skills

Quality engineering: Test planning, requirements analysis, regression testing, end-to-end testing, release-risk assessment, defect isolation, Jira

Automation: Playwright, TypeScript, JavaScript, Sahi migration, AI-assisted development with Cursor

Platforms: Web, iOS, Android, SaaS, firmware, connected devices, REST API concepts

Project technologies: React, Next.js, React Native, Expo, Tailwind CSS, Swift / WidgetKit

Professional Experience

Software QA Engineer II | June 2019 – Present

Lantronix — Nero Global Tracking (formerly Vecima) | Burnaby, BC

Test web and mobile fleet-management products, including GPS Fleet Tracker and DVIR on iOS and Android, alongside firmware and connected devices. Advise the QA manager on testing priorities and review test coverage before execution.

- Owned an approximately three-month migration of 300+ Sahi scenarios from Java/JavaScript to Playwright with TypeScript. Used Cursor for implementation, validated each batch against original behavior, and fully retired Sahi, eliminating more than \$2,000 in annual licensing costs.
- Designed and built RAIT with AI assistance: a web interface and queued local runner used by 3 QA members, 4 Customer Experience members, and 1 developer. Enabled regression testing, automated account setup and bulk device registration, and beacon hardware testing with automated verification.
- Identified large-account slowdowns, intermittent crashes, and missing map data in GPS Fleet Tracker; advocated postponing release. Investigated rendering and reload behavior with Cursor, submitted proposed fixes for developer review, and retested the updated build before release.

Professional Experience Continued

Software QA Engineer II | Selected contributions continued

- Isolated invalid GPS locations through a three-device comparison across firmware versions, tracking intervals, and APN settings. Traced logs through backend processing to the report, identified a satellite-count filtering gap, and verified the fix before release.
- Train incoming interns and review colleagues' test cases before execution; created a phased onboarding guide with linked resources. Introduced RAIT to internal teams and continue to maintain the platform and expand its scenarios.

Jr. Electronic Engineer | May 2018 – April 2019

Neil Squire Society | Burnaby, BC

Designed, prototyped, and validated assistive electronics using microcontrollers, custom PCBs, and Arduino C firmware. Collaborated with mechanical engineers on proximity and sip-and-puff interfaces and built a reusable electronic component library.

Personal Software Projects

Product development with AI implementation assistance; hands-on manual testing and validation.

Bazi Atlas iOS App

Technologies: React Native, Expo, TypeScript, Swift, WidgetKit, Supabase, RevenueCat, SQLite

- Built a bilingual Chinese astrology app with chart analysis, saved records, comparison, and knowledge lookup using AI-assisted development. Personally performed manual testing; AI agents implemented unit and end-to-end tests.
- Validated app workflows and integrations involving Sign in with Apple, purchases, cloud backup, local storage, search, widgets, and deep links.

Reindeer Education Website and Visit Booking

Technologies: Next.js, React, TypeScript, Tailwind CSS, Resend, Vitest, Vercel

- Built a responsive school website and visit-booking system with AI assistance, including program pages, faculty profiles, galleries, and reusable components.
- Implemented booking workflows with input validation, spam protection, duplicate-request handling through UUID idempotency, and email integration.

Education

Bachelor of Applied Science in Engineering Science

Simon Fraser University | February 2018

Electronics Engineering Concentration • Co-operative Education

Leadership and Community

Co-Founder and Director | FCMS | 2021 – Present

Directed six events for 100–700 attendees and a 12-video performance series, coordinating sponsors, volunteers, budgets, schedules, and technical delivery.
